説明

The present invention provides an antimicrobial and fungicidal composition, which comprises hexamethylene tetramine and copper. A method for preparing such a composition comprises: adding 40% to 70% by weight of hexamethylene tetramine powder or crystal into 10% of water containing an emulsifier, thereby rapidly forming an alkaline solution; heating the solution to 30 to 50 DEG C; adding 15% to 45% of a copper agent (copper sulfate) into the abovementioned solution, followed by 5% of an extender (oxydol or ammonia water); mixing the solution to obtain the antimicrobial and fungicidal composition.
