

発明名称： 代替マイナス高電圧の健康プロモータ

Health promoter with alternative negative high voltage based principles

発明名称：	代替マイナス高電圧の健康プロモータ
専利証書番号：	I259095
出願番号：	091135012
出願日：	2002/11/28
公開番号：	474808

説明

A health promoter with alternative negative high voltage is produced based on findings on ageing and metabolism of human body from scientific analysis using physiological electromagnetism and is applicable on a human body to remove the free radicals from the body, promote blood circulation, stimulate hormone secretion, and activate water by the influences of the negative high voltage and the alternative. electric field on the human body, thereby prolonging the ageing process, restoring the cell metabolism of the human body and effectively reducing the occurrence of intrinsic diseases for the human.
