説明

A composition for a binder that is made of synthetic resin mixed with hardener in a proportion of 2:1. The synthetic resin is composed of 65% to 55% polyisocyan and phenol and 35% to 45% alcohol, silicone and barium sulfate. The hardener is composed of amine, anhydro acid, hydroxyl and hydrocarbon. The aforementioned binder can be used as a material for specific purposes after being added with additives mixed evenly in its composition.
