説明

The invention relates to a word segmentation method for Chinese documents, which proceeds division with respect to the inputted Chinese sentence to be segmented in accordance with the possible ways, then conduct weighing estimation procedure processing to each segmentation method using the word composition probability, word length and continuous strength of word to obtain the weighing value of each segmentation method. The segmentation method with highest weighing value is taken as the best segmentation method that effectively solves the drawback of segmentation method that long word has higher priority to conduct correct segmentation of Chinese sentence, ensuring the acquisition of word division result in compliance with document meaning.
